ABOUT ME

Third-year IT student with hands-on experience building end-to-end ML systems across Computer Vision and NLP/LLM domains. Completed 3 real-world projects spanning face recognition, multimodal emotion analysis, and RAG-based chatbots — with measurable results and full deployment. Pursuing an ML Intern role to contribute to production-grade AI systems

EDUCATION

2023 – 2027 **University of Technology and Engineering — Information Technology**
GPA: 3.2 / 4.0

PROJECTS

RAG Chatbot System *(Personal)* *02/2026 – Present*
Tech Stack: *Python, LangChain / LlamaIndex, OpenAI API / HuggingFace, FastAPI, Docker*

- Built a production-ready RAG system using LangChain and vector databases (Pinecone/ChromaDB); reduced LLM hallucination rate by **70%**
- Improved retrieval precision by implementing document chunking strategies, advanced prompt engineering, and re-ranking — boosting answer relevance on a document corpus
- Deployed as a containerized system with FastAPI (backend REST API) and Streamlit (interactive frontend), ensuring seamless end-to-end user experience

GitHub: https://github.com/0402anhhuy/RAG-Chatbot

Multimodal Emotion Recognition System *(Team)* *11/2025 – 02/2026*
Tech Stack: *Python, OpenCV, Scikit-learn, XGBoost, HOG, SVM*

- **84% accuracy**Designed a multimodal emotion classifier fusing visual (HOG + SVM/SVC) and textual (XGBoost, Naive Bayes, Random Forest) branches, achieving
- Implemented a voting ensemble strategy that outperformed single-modality baselines by ~12% on the test set
- Reduced inference latency by 30% through feature selection and hyperparameter tuning (GridSearchCV)

GitHub: https://github.com/0402anhhuy/Multimodal-Emotion-Recognition

Face Recognition & Identification System *(Team)* *10/2025 – 12/2025*
Tech Stack: *Python, YOLOv8, OpenCV, Django, SQL, HuggingFace*

- **95% detection accuracy**Developed a real-time facial recognition pipeline using YOLOv8, reaching
- Enhanced matching robustness with advanced OpenCV preprocessing (noise reduction, face alignment) and deep face embeddings
- Built and deployed a full-stack admin dashboard using HuggingFace for live monitoring and user management

GitHub: https://github.com/0402anhhuy/Face-Recognition-YOLOv8

SKILLS

Languages	Python, SQL, Java
ML / DL	Scikit-learn, PyTorch, NumPy, Pandas, XGBoost, OpenCV
LLM / RAG	LangChain, LlamaIndex, HuggingFace Transformers, Pinecone, ChromaDB
Deployment	FastAPI, Django, Docker, REST API
Tools	Git / GitHub, Jupyter Notebook, VS Code
Language	English — Intermediate (reading technical docs, writing reports)
