TRẦN ANH HUY

Software Engineering Intern

0337686257 | anhhuyrubic@gmail.com | Ho Chi Minh City, Viet Nam

LinkedIn | **Portfolio** | **GitHub**

ABOUT ME

Information Technology student expected to graduate in 2027, with hands-on experience in full-stack web development using ReactJS, Node.js, Spring Boot, and MySQL. Seeking a Software Engineer Intern position to contribute to real-world projects and further develop software engineering skills.

EDUCATION

2023 – 2027 **University of Technology and Engineering — Information Technology**

GPA: 3.3 / 4.0

PROJECTS

Multi-Vendor Keycap E-Commerce Platform

05/2026 - Present

Tech Stack: ReactJS, Tailwind CSS, NodeJS, ExpressJS, MySQL, Sequelize, Docker, JWT

- Developed a full-stack multi-vendor e-commerce platform supporting vendor store front management, inventory tracking, order processing, and customer shopping experience
- Designed and implemented **RESTful APIs** using **ExpressJS** and **Sequelize ORM**, handling authentication, product management, vendor operations, and order workflows
- Implemented JWT-based **Role-Based Access Control (RBAC)** for Admin, Vendor, and Customer roles, ensuring secure access management across the system
- Built responsive UI with **ReactJS** and **Tailwind CSS**, and containerized services using **Docker** Compose
- Integrated a **RAG chatbot system** to support customer consultation and provide analytics insights for admins

GitHub: https://github.com/0402anhhuy/Multi_Vendor-Keycap-E-commerce-Platform

RAG Chatbot System

02/2026 – Present

Domain: Study Support AI / Knowledge Retrieval System

Tech Stack: Python, LangChain / LlamaIndex, OpenAI API / HuggingFace, FastAPI, Docker

- Designed and implemented an end-to-end **Retrieval-Augmented Generation (RAG)** system integrating vector databases (Pinecone, ChromaDB)
- Reduced incorrect or unsupported responses by approximately **40%** during manual evaluation on internal testing queries through retrieval optimization and prompt engineering
- Improved answer relevance using **document chunking, re-ranking, and embedding tuning**
- Built and deployed a **containerized RESTful API** using FastAPI and Docker, with an interactive frontend via Streamlit

GitHub: https://github.com/0402anhhuy/RAG-Chatbot

Aurum – Jewelry E-commerce

11/2025 – 02/2026

Tech Stack: ReactJS, JavaScript, HTML, CSS, Spring Boot, SQL, Python, Docker

- Developed a full-stack jewelry e-commerce website using **ReactJS** for Frontend and **Spring Boot** for Backend
- Built responsive UI, integrated **RESTful APIs**, and applied React Hooks
- Designed **SQL** database schema and implemented JWT authentication
- Dockerized frontend and backend services into separate containers for deployment
- Developed a Python-based recommendation microservice utilizing K-Means clustering to generate personalized product recommendations based on customer behavior

SKILLS

Languages	Python, SQL, Java, JavaScript
ML / DL	Scikit-learn, PyTorch, NumPy, Pandas, OpenCV
Frontend	ReactJS, HTML5, CSS3, TailwindCSS
Backend	Spring Boot, RESTful API, FastAPI, ExpressJS, NodeJS
Database	MySQL, SQL Server, Sequelize ORM,
Tools	Git, GitHub, Docker, Postman
Language	English — Intermediate (reading technical docs, writing reports)
